

Where logistics and business come together

Vaasa region

Vaasa Airport Park

Vaasa region logistics center

As one of the most international and entrepreneurial regions in Finland, the Vaasa region is home to several world class companies. Located at the conjunction of two European main roads, shortest seaway between Finland and Sweden, railroad and one of the country's busiest airports, the region also offers an ideal location for logistical operations. Here, companies have the possibility to combine all four modes of transport together with other business operations.

Besides efficient traffic connections, the region is geographically located at the westernmost Finnish coast, creating a natural gateway to Sweden and a node between east and west. Distance of only 70 km from the Nordic Logistic Center in Umeå, the two logistics centers will create the base for Norway-Sweden-Finland-Russia -corridor together with functional north-south-connections.

Logistics development in Vaasa Region

Port of Vaasa

With daily connections to Umeå and versatile port services, the port of Vaasa acts as the region's most important gateway for heavy cargo. Ongoing investments will further improve flexible and efficient cargo handling.

Logistics center

Located right next to Vaasa airport, railroad and the conjunction of E8 and E12 main roads, Vaasa region logistics center will offer business sites for state-of-the-art logistics. Vaasa harbour is located only 10 km away, which makes the location ideal for combining different modes of transport. Furthermore, the area offers logical settings for large-scale logistical solutions, such as distribution centers or hubs.

Special transportations

play an important role in the region. The main road E8 serves as the most important special transportation route in Finland, and region's municipalities pay a lot of attention in traffic solutions in order to ensure smooth special transportations. In addition, the know-how concentrated in the area is significant - a great number of companies operating special transportations are located in the region.

-  Railway electrification
-  Routes for special transport
-  Planned road connections
-  A Vaasa Airport Logistics Center (VALC)
-  B Logistics center for land traffic
-  C Harbour, railway & yard development, crane investment

Flourishing business

Vaasa region is the home to Scandinavia's largest concentration of energy technology know-how. Employing over 10,000 professionals and creating over 4 billion eur in turnover, the cluster forms the backbone for future growth and offers excellent synergy-opportunities for green logistics solutions. The prospering business takes form in the Vaasa Airport Park, which is one of the fastest growing business parks in the Nordic countries. Besides in-

ternational business, the region is also known for skilful workforce - 13 000 students, 7 university units and cluster of global companies secure access to suitable labour.

Competing in global markets, the companies are always striving for the most efficient and reliable logistical solutions. If you have ground breaking concepts in logistics, we have the location for it.
